Joint Intermodal Platform Management Service Project Update

Ms. Sandy Gorba
Chief, AIDPMO

JIPMS Background

Goal: Define functional capabilities desired in a joint system to track and manage intermodal assets worldwide – providing a single system / interface for inventory managers and operational forces on the ground.

- DSG Action Item – JIWG to lead a Joint Intermodal Platform Management System (JIPMS) Abbreviated Capabilities Based Assessment Team and report findings to DSG
- ACBAT established Jan 07, members from DSG, JIWG, COCOMs, Services, and Agencies
- Site visits/system review conducted Feb 07 – May 07
 - Four systems: ACAMS, IBS-CMM, AIMS, PAT
- Business Case Analysis provided to DSG Jun 07
- BCA recommended Course of Action began Sep 07
 - Spiral 1 – Focus on data sharing, service oriented architecture or Net-centric concepts and system to system interface - completed
 - Spiral 2 – Migrate to single data source, single sign-on and integration with other initiatives - To be discussed at JIWG meeting Dec 09

ACAMS/IBS CMM Web Service

- ACAMS / IBS CMM Web Service implemented Jul 08
- ACAMS has accepted over 2.4 M container record updates.
- Data updated every 12 hours with established business rules.
- Continuous improvements, current effort includes data plate elements
- Planned updates based on IBS CMM CONUS Port roll-out

DoD ISO Register

- ISO Register is being used in Production since 2008 DoD ISO Container Inventory
- Ability to generate ISO numbers and maintain history of life cycle events
- Container records archived, not deleted
- Disciplined approval process, improved visibility over workflow of procurement and registration
- Enhanced to capture additional asset information
- Automated capability to capture re-stenciling
- Implemented as the single source for generating ISO numbers for DoD. Nov 09

Single Sign-On (CAC)

- Efforts are underway to implement sign-on using CAC for ACAMS.
- Current design includes use of AKO/DKO as authentication provider.
